Distance of Planets.

The distance of the sun and planets from the earth may best be perceived by the following fact: A train of cars going at a mile a minute would reach the moon in 150 days, Venus in fifty years, Mars in seventy-six years, Mercury in 110 years, the sun in 175 years, Jupiter in 740 years, Saturn in 1,470 years, Uranus in 3,100 years, Neptune in 5,055 years. To reach the nearest fixed star our train, steadily maintaining its mile a minute speed, would require about 40,000,000 years. You may rely upon the general accuracy of the above schedule.—New York
